Acknowledgments

A thesis takes time. Time to learn, time to think and time to interact. Göttingen is an exceptional place in all three respects. There, I received an outstanding education, one that stimulates intellectual curiosity and establishes the solid foundations of future work. Nowhere have I encountered such a collegial place, where doors are wide open, students welcome and involvement into the field of Development Economics is so intense. Let me here thank collectively the Development Economics Research Group at the University of Göttingen for being itself and offering so much.

I thank my advisor Stephan Klasen. Throughout the years he gave me extremely valuable support and guidance. He knew how to reorient my ideas at critical junctures and push me forward. His sharp mind always detects the flaw of an argument many steps ahead, as well as seeing the way how to resolve it. I owe much more to him than what is reflected in this thesis. I also would like to thank Axel Dreher and Matin Qaim for helpful discussions and for serving on my thesis committee. In particular, I am indebted to Axel for being my second supervisor upon short-notice after professor Stefan Sperlich had left Göttingen during 2010.

The Development Economics Research Group would not function as a group without the great help of the support and administrative staff. Many thanks to Michaela Beckmann, Sabine Jaep and Susanne Pritz. They have helped me more than once in finding a way through the mysterious labyrinths of the administrative university procedures.

I gratefully acknowledge financial support from the Department of Economics at the University of Göttingen and the German Research Foundation (DFG). Without this assistance writing a thesis over several years would have been impossible.

Over the last years I have collaborated with many colleagues at the University of Göttingen. In particular, I would like to thank my co-authors Johannes Gräb and Robert Rudolf with whom I tremendously enjoyed uncovering the puzzles of Lake Victoria and Indonesian agriculture. On board the same ship for several years, many became friends along the way of working on this thesis. Although numerous people deserve to be mentioned I want to single out two persons namely Isis Gaddis and Andreas Fuchs who have been a constant source of inspiration,

motivation and friendship. A day without a coffee break and chat with Isis is only half a day. Moreover, it is from her that I got exposed to the legendary 'Best-practice poverty methodology'. Likewise, I am extremely grateful for Andreas taking care of drinks, excursions and endless political discussions that helped me to forget the stress of research.

I am also very much indebted to my friends outside the university landscape of Göttingen, who supported me in many ways and who kept my life fun. My special thanks go to Christoph Hornyh and Tobias Wolff who once convinced me to study Economics and Steffen Krüger and Julian Marewski for inspiring me to pursue a Ph.D. back in my freshman year.

Lastly, my deepest gratitude goes to my family for their unflagging support throughout my life. None of this would have been possible without the encouragement and understanding of my parents and my brother. It is to them that I dedicate this dissertation.

Jan Priebe
Göttingen, June 2011

Contents

List of Tables	xii
List of Figures	xiii
List of Abbreviations	xv
Introduction and Overview	1
1 Low Malnutrition but High Mortality: Explaining the Puzzle of the Lake Victoria Region	13
1.1 Introduction	14
1.2 The Puzzle	16
1.3 Theoretical Framework	20
1.4 Geography vs. Ethnicity: The Kenyan Context	23
1.4.1 Nutritional Environment	23
1.4.2 Epidemiological Factors	27
1.4.3 Cultural Factors	28
1.5 Empirical Findings	29
1.5.1 Data	29
1.5.2 Descriptive Statistics	33
1.5.3 Method	37
1.5.4 Regression Results	40
1.6 Conclusion	53
2 Child Costs and the Causal Effect of Fertility on Female Labor Supply: An Investigation for Indonesia 1993-2008	55
2.1 Introduction	56
2.2 Theoretical Framework	58
2.3 Data	62
2.4 The Indonesian context and descriptive statistics	64
2.5 Identification of the causal effect	74

2.5.1	The sex preference instrument	74
2.5.2	Econometric Framework: LATE	77
2.5.3	Discussion of results	78
2.6	Robustness Checks and Extensions	82
2.7	Conclusion	91
3	Cash Crop Choice and Income Dynamics in Rural Areas: Evidence for Post-Crisis Indonesia	93
3.1	Introduction	94
3.2	Literature Review	96
3.3	Data and Setting	97
3.4	Model and Results	108
3.5	Extension	114
3.6	Conclusion	118
B	Appendix Essay 2	121
C	Appendix Essay 3	125

List of Tables

1.1	Mortality and undernutrition rates in the SSA context	18
1.2	Classification of Variables Influencing Health and Mortality Outcomes	22
1.3	Description on variables of interest	31
1.4	Descriptive statistics on variables of interest	34
1.5	Determinants of stunting	42
1.6	Determinants of wasting	43
1.7	Determinants of under5-mortality	46
1.8	Variance of family random effect	50
1.9	Robustness checks: determinants of stunting and under5-mortality	52
2.1	Descriptive Statistics (Women Aged 21-35 with at least two children)	63
2.2	Female Labor Supply (Women Aged 21-35 with at least two children)	68
2.3	FLS by rural/urban (Women Aged 21-35 with at least two children)	69
2.4	Female labor force participation by expenditure quintile (Women Aged 21-35 with at least two children)	71
2.5	Expenditure patterns (Women Aged 21-35 with at least two children)	73
2.6	Composition of births (Women Aged 21-35 with at least two children)	74
2.7	Expenditure patterns (Women Aged 21-35 with at least two children - Pooled sample)	76
2.8	Estimates of Female Labor Supply Model, Women Aged 21-35 with 2 or more children	80
2.9	Estimates of Female Labor Supply Model, Women Aged 21-35 with 2 or more children	83
2.10	Statistics on Expenditure Quintiles	85
2.11	Statistics on Education Terciles	85

2.12	Estimates of Female Labor Supply	87
2.13	Estimates of Female Labor Supply Model, Women Aged 21-35 with 2 or more children	89
2.14	Twin estimates of second multiple birth	90
3.1	Summary Statistics (Means) on STORMA households	101
3.2	Cocoa and coffee production	102
3.3	Agricultural Diversification - Mean Incomes of Self-employment .	103
3.4	Income Sector Transition Matrix	105
3.5	Income Quintile Statistics	107
3.6	Determinants of income and income growth	111
3.7	Selected robustness checks on basic results	113
3.8	Regional OLS Regressions - Comparison I	117
B.1	Sample Sizes: Susenas 1993-2008	123
B.2	Twin Statistics - Pooled Indonesian DHSs	123
C.1	Description of variables	126
C.2	Comparison of Regional Means	127
C.3	Regional OLS Regressions - Comparison II	128

List of Figures

1	Development Economics articles in the AER (Period 1950 to 2010)	4
1.1	Stunting rates in SSA	19
1.2	Wasting rates in SSA	19
1.3	Theoretical Framework	21
1.4	Water Requirement Satisfaction Index (WRSI)	25
1.5	Normalized Difference Vegetation Index - Kenya	25
1.6	Climate Suitability for Endemic Malaria	26
2.1	Deviations from period average: Indonesia 1993-2008, Sample: Women aged 21-35 with 2 or more children and their spouses . . .	65
2.2	Mean Outcomes (Women Aged 21-35 with 2 or more children)	67

List of Abbreviations

AIDS	Acquired Immunodeficiency Syndrome
ANOVA	Analysis of Variance
ARE	Area unit of $100m^2$
AVG	Average
BMI	Body Mass Index
BPS	National Statistical Office Indonesia
CBS	Central Bureau of Statistics Kenya
CEF	Conditional Expectation Function
Cons	Constant
CS	Central Sulawesi
CV	Coefficient of Variation
CPI	Consumer Price Index
DHS	Demographic and Health Survey
EXP	Expenditure
Est	Estimate
FEWS	Famine Early Warning System
GIS	Geographic Information System
GMM	General Method of Moments
GPS	Geographic Positioning System
HH	Household
HIV	Human Immunodeficiency Virus
IFLS	Indonesian Family Life Survey
ILO	International Labor Organization
IMF	International Monetary Fund
IPUMS	Integrated Public Use Microdata series
IV	Instrumental Variable
JIVE	Jackknife Instrumental Variable Estimator
KDHS	Kenyan Demographic and Health Survey
KIHBS	Kenya Integrated Household Budget Survey
KNBS	Kenya National Bureau of Statistics
LATE	Local Average Treatment Effect

LIML	Limited Information Maximum Likelihood
Lit	Literate
LR	Likelihood Ratio
MARA	Mapping Malaria risk in Africa
NASA	National Aeronautics and Space Administration
No	Number
NDVI	Normalized Difference Vegetation Index
NSE	Non-farm self-employment
Obs	Observations
OLS	Ordinary Least Squares
PC	Per Capita
POP	Population
RCT	Randomized Control Trials
Sakernas	Indonesian Labor Force Survey
SE	Standard Error
SSA	Sub-Saharan Africa
SSIV	Split Sample Instrumental Variable Estimator
Std dev	Standard Deviation
Storma	Project on the Stability of Rainforest Margins in Indonesia
Susenas	Indonesian National Socioeconomic Survey
PCA	Principal Component Analysis
TFR	Total Fertility Rate
U5M	Under 5 Mortality
UN	United Nations
UNDP	United Nations Development Programme
UNICEF	United Nations Children's Fund
U.S.	United States
USAID	United States Agency for International Development
Var	Variance
WHO	World Health Organization
WRSI	Water Requirement Satisfaction Index
2SLS	Two Stage Least Squares
